PLACA

BUILT FOR YOUR REPORTING WORKFLOW

From reporting needs to a working platform.

Built around the coordination and reporting needs you shared—ready for your review and a scoped pilot.

01

Capture

Partners submit aggregate reports and workplans. Built-in checks catch inconsistent counts before submission.

02

Review

PLACA officers validate or return reports with a reason; partners receive in-app status notifications.

03

Use

Authorized staff see role-scoped dashboards, trends and published summaries from approved counts.

04

Coordinate

Role-based access connects partners, LACA officers and PLACA staff across reporting and programme workflows.

Ready to demonstrate

Walk through one complete journey: partner report → PLACA review → dashboard. The demo includes synthetic quarterly data to make the charts useful.

Important: sample figures are synthetic, not program results. Production use requires agreed data governance, security, backups, training and support.

Proposed pilot measures

- Timeliness and completeness of reports
- Corrections and review turnaround
- User adoption and feedback

My ask: approve a scoped pilot.

Choose participating organizations/LGAs, name a focal person, and agree on timeline, responsibilities, success measures and production readiness.

Review → Pilot → Measure
